fracture.

After reducing the fracture, or setting the dislocation, if such it was, we arranged a plaster cast for him. The cast was removed wover a week ago and to all appearances his cevical vert-brie are now perfectly sound.

We shall allow him to sit up to-lay for the first time. I think it would have been possible for him do so several ways ago, but we were unwill ng to take any chances.

"He suffers no pain whatever now, and I am very positive that a certain cure has been effected. His discharge from the hospital is somewhat uncertain, of course, as we desire to keep him here until there is no danger of his again fracturing or dislocating the vertebree.

"He may possibly have a signit stiffness to his neck, but I hardly think ne will experience any lurther inconvenience. Of course his constant tying motionless in one position has exhausted him considerably, but he will now soon recover from that."

The only other case of a broken neck at Rosewelt Hospital resolited fatally, probably through a mother's anxiety for her little son's comfort. The boy had been place upon a mattress prior to being bandaged. The mother thought that he was not in a comfortable position, and before any-body could prevent her turned him upon his side.
